# EXECUTIVE SUMMARY

## Objective

We want to create a platform for connecting Student Startups with potential Student employees.

## Plan

We are going to create a web site that will allow students and startups to create profiles that will showcase their ideas and skills. These profiles will then be matched and display the business ideas/ students that match their interests and sought after skills.

# FUNCTIONAL DESCRIPTION

## Problem

At BYU there are many students who develop business ideas but don't have a simple means to find students with the skills they need to start their idea. On the student side there are a lot of students looking to gain real life experience in businesses in the early stages of development. They might want to work for a start up to gain experience in their field, to build something from the ground up, or simply to build their resumes.

## Solution

This web site will allow Startups to create profiles and allow students to browse through them based on their interests. Students will also be able to create profiles listing their skills and interests. There will be two separate forms for students and startups. Then we will match them according to their selected interests and skills.

# GAME PLAN

## Methods

- Landing Page
  - Login Page
  - Signup for Student
  - Signup for Startup
  - Raw Matching for Student
  - Raw Matching for Startup
-

---

## **Milestones**

- May 25 Landing Page / Sign up html pages.
- April 1 Connect to database and save profiles.
- April 8 List matching businesses/students.
